

ERRATUM

Open Access

Erratum: Increased spread and replication efficiency of *Listeria monocytogenes* in organotypic brain-slices is related to multilocus variable number of tandem repeat analysis (MLVA) complex

Claudia Guldemann^{1,2}, Michelle Bärtschi¹, Joachim Frey³, Andreas Zurbriggen¹, Torsten Seuberlich¹ and Anna Oevermann^{1*}

Erratum

The original version of this article unfortunately contained a mistake. Figures two, three and four (Figs. 1, 2 and 3 here, respectively) and their associated legends were interchanged in the HTML and PDF versions of this manuscript. The correct versions are given below. In addition, Figure Five (Fig. 4 here) was missing in the HTML version of this manuscript. The correct figure Five (Fig. 4 here) is also included below.

Fig. 1 Immunofluorescence stained confocal images of bacteria in infected brain-slices. **a:** Delineation of an infection focus (yellow line). *L. monocytogenes* are stained in red. The surface area covered by *L. monocytogenes* was drawn and calculated using the Fluoview software (Olympus FV10-ASW Version 03.01.01.09) Magnification 20x. **b:** Representative double-immunofluorescence of a *L. monocytogenes* infected brain-slice. The vast majority of bacteria are found within microglia. Left: Microglia are stained with CD68 in green. Center: *L. monocytogenes* in red. Right: Overlay (bar = 40 μm)
