Correction to: Characterization of biofilm-forming capacity and resistance to sanitizers of a range of E.coli O26 pathotypes from clinical cases and cattle in Australia

Salma A. Lajhar^{1,2*}, Jeremy Brownlie¹ and Robert Barlow²

Correction

1. On page 4 of the original publication [1], the correct sentence should read:
Quantitative measurement was performed by dissolving CV stained pellicle in 4 ml of 85% ethanol and the OD₅₇₀ was measured using microplate reader at 200 µl per well.
2. Table 2 of this original publication contained some errors. The updated Table 2 is published in this correction article.

^aValues are shown as mean of biofilm production ± standard error on polystyrene surfaces, SS: stainless steel, GS: glass slide at 25 °C. According to the biofilm mass quantified with crystal violet staining assay at 570 nm isolates were labelled as the following: low, medium and thick biofilm formers

^bVisible biofilms on stainless steel and glass slides and was scored as 0: no visible biofilm, scored on a scale from 1 to 3 to a thick biofilm at the air-liquid

^cThe presence and absence of visible pellicles biofilms was scored visually before staining with CV. Strains with visible pellicles at the air-liquid interface had $OD_{570} \geq 0.48$
